It's Cube time, Sir: This little baby gets even the English excited.

It was the center of attraction at the Cube days in Abingdon. The first orders are now starting to arrive at WEINIG UK. P&J Joinery beat them all to it. We will be reporting.

P & J Joinery are a successful small company comprising three people and the owner, Philip Nixey. The business is thriving and is looking to invest in the latest technology to increase efficiency. They put their continuous success over 23 years down to the bespoke, personal, and flexible service they provide. The Company are prepared to machine any type of components for their customers – builders and private clients and give a complete joinery service for windows, doors, staircases, kitchen and bedroom furniture manufacture.

They use traditional standard machines in their workshop and also used their WEINIG Profimat 22N, very successfully for 22 years. So the new features on the WEINIG Cube make it the ideal addition to the workshop, to keep up with the latest technology and to grow their business.

Said Philip Nixey, Owner, "We chose WEINIG because of the reliable German engineering we experienced on the Profimat and the prompt service backup we received over many years. The Cube provides many of the extra benefits we needed to attract more business. It is easy to use, fast, and more precise. We particularly needed its 260 x 160 mm specification, and were highly impressed by its versatility, and saving in set-up time. In fact, the Cube also has numerous other practical new features such as: providing an energy saving of 60% in dust extraction, simple and fast knife changes on its 'EasyLock' system, and safer feeding of short pieces."

The Cube reinvents the planing operation. It is very fast, highly accurate and easy to use as never before, being equipped with new technology laser measuring and automatic adjustment for width and height. It is particularly suitable for smaller companies and those that currently use standard machines and traditional methods of 4-sided planing. It does not have to be run all day long to be profitable – as it is so productive, efficient and attractively priced.

The Cube is very compact and is ideal where space in the workshop is tight. And it can easily be relocated by using hand-operated lift equipment. It does not require time consuming adjustments and eliminates set-up error due to its part recognition technology. The operator has the added advantage of being able to adjust the machine dimensions whilst spindles are running. Using WEINIG's simple 'EasyLock' knife change system, downtime is reduced dramatically.

"Since we installed the Cube in our factory", said Philip Nixey, "We have had numerous benefits in time saving with downtime being kept to a minimum, which has made us more versatile and productive, providing increased capacity to take on more work and be more competitive. We were delighted with the installation, which went very smoothly".
